Explain:

$mail->username=""; = Here we are assigning our email username. This username is same as email address

$mail->password=""; = Here we are assigning our email password. This password is not normal email password, we can get this password after 2step verification in Gmail account.

$mail->setFrom=""; = Here we are assigning our sender email address. This email address is same as "username" as you can see on the top.

$mail->addAddress=""; = Here we are assigning the receiver email address. That will receive the email we've sent.
